

3.01 Orientation of New Operators

1. Purpose

The purpose of the Standard Operating Procedure is to identify the hazards and define the steps in orientation of new operators .

2. Scope

This procedure is intended for use by all Silverpoint employees .

3. Hazard Identification

- Physical Stress .
- Mental Stress .
- Fatigue .
- Information Overload .

4. EHS Requirements

- Fire retardant coveralls .
- Approved footwear
- Safety Glasses .
- Gloves .
- Hard Hat.
- Hearing Protection .

5. References

- Silverpoint Corporate Codes of Practice
- Alberta OH&S
- Silverpoint Task List
- Silverpoint THA 3.01

• • **One Meter Rule** - a spotter will be required whenever a piece of equipment is going to be driven within one meter of

any stationary object .

- Always keep as much distance as possible between your equipment and all stationary objects .
- If the task or job changes , stop and reevaluate your route . Realignment is a simple task that can be easily completed to reduce the risks .
- If realignment or a different route is not possible , and the distance will be closer than one meter a spotter will be mandatory .

A Healthier Workplace

§ Alberta defines “Workplace ” as all or any part of a building or structure or other enclosed area where employees perform their duties .

§ There is no smoking permitted in any Silverpoint Trucks , or shacks

§ Anyone caught smoking in a workplace will be subject to a \$200.00 fine.

§ When operating any company vehicles please allow enough time to stop for “Smoke Breaks ”.

§ When on any customer site be sure to use the designated smoking area and stay clear of any doorways etc.

6. Procedure

6.1. After interviews and test drive is completed and with the approval of management , all new operators will receive or be required to complete these steps before being sent to work .

6.1.1. Office Orientation , New Hire Package .

6.1.2. Employee Hiring Package .

6.1.3. Memos and Newsletters .

6.1.4. New Phone List.

6.1.5. Copy of all Tickets for Employee File.

6.2. Office staff will be required to complete the following :

6.2.1. Add New Employee to Phone list.

6.2.2. Create New Employee folder.

6.2.3. Scan in copies of employee info which will then be saved on the p drive, along with the benefit forms if applicable .

6.2.4. Update Safety Certificate in Safety Sync .

6.2.5. Add to Big Road

6.3. Upon completing the orientations and paperwork , employees are then permitted to head to the field for further training .
Once there our senior transportation operators will train them on the following :

- 6.3.1. All Standard Operating Procedures .
- 6.3.2. How to properly complete paperwork .
- 6.3.3. Location of operations manuals in vacuum and water trucks .
- 6.3.4. Show them where equipment is stored .
- 6.3.5. Rig orientation and drilling company orientation , many of the company orientation are now available thru the office.
- 6.3.6. Truck and trailer concerns .
- 6.3.7. As well as shop training with the mechanical staff to learn about greasing the trucks , agitators and how they work , the TPC system along with trouble shooting , when and how oil changes are to be done , Hibon servicing and how the system works , types of oil used in the trucks and the Hibon , and at when the servicing is expected to be done , lastly how the trucks work and the parts of the whole system .
- 6.4. Tire Chains – Understand the importance of them . Understand how to put them on the truck and how to keep them tight . Loose chains can damage the TPC lines and tires and be sure that they are the right size for the truck tires . Understand the increased traction that they supply , and the extra strain on the trucks drive line that comes with using tire chains . Also , how to notice signs of wearing , how to fix the chains .
- 6.5. Tire Chock Blocks for Trucks - chock blocks must be placed between the wheels of the truck anytime you are parking to prevent the truck from moving .
- 6.6. Positive Air Shutoff – The purpose of the positive air shutoff is to shut the engine down when an outside source of fuel is airborne . This unit is located on the engine intake , usually a 4 inch pipe on the drivers ' side . There are switches in ALL of our equipment , when you first climb into the truck , it is a good practice to locate the switch . This system prevents the engine from revving and igniting the fuel source . If the truck won't start , someone could have tripped the switch by accident . This will cause the engine to turn over very fast , but not start because there is no air coming into the engine . When you test this feature , have the hood open , always test with the engine shut off . Turn the key on , flip the switch , you should hear a loud click , try to start the engine , it should not start . To reset the shutoff , put the switch to the off position , and on the back of the unit itself there will be a manual handle that you pull , push or twist to a reset position .
- 6.7. Power Lines – Pay close attention when moving around the lease and under power lines . When you are in the field , keep the hoist down except for the last part of the load . Keep a look out for the power lines . When you are on location , the Rig Manager's shack is always in the line of fire because the power cord goes from the rig to the push shack . Never drive on location with your hoist up .
- 6.8. Understand how to operate heat lines for rear valves , know how to turn them off in case of a leak .
- 6.9. Understand about clutch free play and clutch brake operation ,
- 6.10. Over Dimensional sign on front of truck and back of trailer when hauling the trailer and off the truck when trailer is unhooked .
- 6.11. Keep track of every load and time it was done , this helps with over time charges and looking back into past days

worked if you're trying to charge overtime .

- 6.12. PMI – Fill out every two weeks , you have the whole two-week period to fill out; don't fill out in one day. All items on the PMI must be checked at least once every two weeks , some will be checked daily. The hours of oil changes and other maintenance items are very important for warranties and tracking for our mechanics .
- 6.13. When our vacuum truck is landspraying with a Silverpoint technician , it is the responsibility of the technician to complete the ticket and have it signed by the wellsite supervisor . If our vacuum truck is hauling to a remote sump or completing any other operation where the Silverpoint technician is not required , it is the responsibility of the vacuum truck operator to complete the ticket and have it signed . Please ensure that when you are landspraying with a Silverpoint technician that you receive a ticket number from them . This will assist you in preventing any deduction of pay for incomplete timesheets .
- 6.14. *On-Site Work* – is defined as work carried out on a customer site or other third-party location , remote to an existing Silverpoint branch or service centre you are working on site with a living accommodation supplied by Silverpoint , or you are unable to return home each night and are housed in a remote location for an extended period of time . The equipment is billed out on a day rate .

Call Out Work – is defined as work carried out on a customer site or other third-party location for a specified time period when you travel from and return to your base branch office and is not expected to stay on site for an extended period of time . You are able to return home on a nightly basis . The equipment is billed out on an hourly rate .

Shop Work – is defined as work carried out in a shop/maintenance environment at a Silverpoint branch and/or location . Hourly work does not involve the operation of heavy equipment .

Rain Days - For days that you are at an on-site work project and are unable to perform your job due to wet weather conditions you will be paid your meal allowance and field allowance but no hourly rate and with no guaranteed daily rate for those days .

Overtime - Overtime at time and a half will be paid for hours worked over 8 hours per day and is already included in your guaranteed daily rate for the standard 12-hour shift . If you are required to work more than 12 hours on site, please contact your Branch Manager for necessary approvals .

- 6.15. Slow down , before you act think about what the consequences of your actions might be, walk around your truck before you drive away, get, or ask for help if you need it. It is very important that each incident gets reported , and on time . When working on or off roads , it is important to find out the company's policy on road right of way. Most companies state that the small vehicles shall yield to the larger vehicles .

6.16. Timesheets

Timesheets are due for the 1st-15th or the 16th-31st within 2 days of the period ending , please fax to the office, if you are unable to send it in call administration with your days and hours .

Expenses

As business expenses are paid by accounting and not Payroll , they can not be submitted on your timesheet . A Silverpoint expense report must be completed with as much detail as possible , and all itemized receipts must be

attached . Submit completed expense reports to your supervisor for approval . Unless other arrangements are made with administration all expense cheques will be forwarded to the branch office .

Vehicle Expenses

All personal vehicle expenses must have prior approval from your supervisor . If you only have one instance of a personal vehicle expense , you may add to your timesheet in the other column with comments and who approved . For more than one instance or recurring charges please complete a vehicle expense report showing starting and ending odometer readings and daily breakdown . If you have any questions or concerns , please contact the office .

6.17. Bi- Monthly Envelope :

This envelope will be used to hand in all of your field paperwork .

It is a check list of the paperwork to be submitted every 15th and the end of the month . Send it in by Greyhound to the office or give to a Silverpoint supervisor . If no paperwork is checked off and the envelope is sent in, you need to give a reason why it was not sent in on the line provided . (E.g., you are switched out on the 10th and someone else sent in the PMI for that unit on the 15th, write that explanation with the other operator's name in the box provided . This envelope is the drivers and is not to be left in the equipment for someone else to submit .

Equipment Field Ticket Book :

All employee chargeable field days must be billed to a client, whether billing directly to client or a Silverpoint technician .

Ensure ticket # is on timesheets for later comparison .

Please put C/O Silverpoint after the client if billing through a Silverpoint Technician .

Driver's name : list all drivers including trainees , use comments area provided if required .

White and Pink copies to the branch office, Yellow to the client, Goldenrod to be left in the book .

This is how Silverpoint gets paid; failure to complete billing may result in you not getting paid until the billing is completed .

Pre- Job Safety Meeting & Hazard Assessment :

The Silverpoint PJSM&HA is used to evaluate the hazards for the work you will be doing while on location . OH&S Regulations require that a hazard assessment be completed on a regular basis and updated as new hazards are identified . While we use our SOPs to identify the basic hazards associated with our normal work there are always unidentified hazards at new job sites and new hazards can be introduced by different equipment coming on location or the rig doing something a different way than what we are used to doing it.

At the start of each well or a minimum of one per week , you will complete a PJSM&HA, identify any hazards , and implement the necessary controls to eliminate or reduce the hazard . If there are changes to what you are doing, changes to the work site or if new equipment is brought onto the work site take the time to update the hazard

assessment .

Incident Reports :

The Silverpoint incident report form is what we will be using to report injuries , spills , property damage and vehicle accidents . Silverpoint would like to get any reports in as soon as possible because it is easier to enter them as they happen than it is to enter them all at once at the end of the pay period , so please try to get any incident reports in ASAP.

What does this mean for you, well basically you will fill out the report as soon as you can and send it to us by fax (the consultant will send it for you, tell him it has to do with safety and he will help you out) and if that doesn't work just call the office and we will make a copy of what you have written on your report . There are also a lot of great apps out there for your phone that you can use to send in the paperwork (example : CAMSCANNER). These apps allow you take a picture of the document and email it as a PDF for example . You still need to get the original into us ASAP because we will scan it and include your original copy in the online reporting .

Hazard / Near miss / Positive Observation Report :

A **Hazard** is a situation that poses a level of threat to life, health , property , or environment . A hazardous situation that has occurred is called an incident.

Hazard Identification is the process of identifying and reporting a situation that poses a level of threat to life, health , property , or environment ; by quickly reporting hazards , their severity can be reduced by introducing controls or if possible , completely eliminating the hazard .

A **Near miss** is an unplanned event that did not result in injury, illness , or damage but had the potential to do so. Only a fortunate break in the chain of events prevented an injury, fatality, or damage .

Positive Observations : this is an opportunity to report the positive things that happen at work .

Has a co-worker gone out of their way to help you out, did someone stop and ask if you're ok when you were stopped on the side of the road? Did a coworker stop and help you chain up, did the rig hands help you move your hoses or clean out a tank? Did you learn something today that everyone can benefit from?

Please take the time to report any positive observation you see while at work .

Well Site Trailer PMI and Inventory :

The operator assigned the well site trailer is responsible for the care and maintenance of the well site trailer and must submit this inspection once every pay period .

If the assigned operator is not on site when the well site trailer PMI and inventory is due, the person that is working with that unit is responsible for making sure it is completed and sent into the office in the envelope .

During switch out both the incoming and outgoing operators must review and sign off on the well site trailer PMI and inventory .

Use this to mark down and personal items you are leaving in the trailer when you go for days off.

Vacuum Truck PMI and Inventory :

Preventive Maintenance Inspection book is to be left in the truck at all times, if the truck comes home without it for any reason the mechanics have no way of knowing what needs to be repaired on the truck.

Use the PMI to record any repairs you have done to the truck, any parts that you have replaced and for parts and service you require.

Inventories must be completed during operator switch outs. Incoming and outgoing operator's signatures must be on the inventory list.

Inventories will be completed by the maintenance staff at the shop when a truck comes in from the field.

Operators are required to complete an inventory before leaving the yard with a truck to ensure that all required equipment is on the truck.

To be completed on the unit you are operating once per pay period and submitted in the envelope. The operator that is running the truck on the 15th or the last day of the month is responsible for completing anything that is not done on the PMI and submitting it to the office in the envelope.

Emergency Notification List

To be completed when ever you start work for a different oil company or move to a new project area. This list must be updated and posted in your shack at all times. Numbers are available from the consultant, or you can find them in the Doghouse. Be sure to have your technicians and consultant's phone numbers on the ENL and then program them into your phone so you have it with you if you have problems in the field.

Safety Sync

Safety Sync is our online training portal where you will complete most of your training that is required of you. Here you will find copies of all your completed certificates, memos, SOP's, orientations, policies, SDS Sheets

Logbooks :

Logbooks are used to track the hours that you work and drive in a day.

You must be able to produce your logbook when requested by a DOT or police officer. Your logbook must be updated every 2 hours when towing a well site trailer and every 4 hours when just driving the truck.

Silverpoint currently uses an electronic logging app for log sheets (Big Road) which is done on your cell phone. You will be set up onto big roads upon hire and you will receive an email from them regarding logging in and passwords. Once you have downloaded the app on your mobile device you can go online to <https://www.bigroad.com/> there you can scroll down to the bottom and under learn more, click on web demos and select the big road mobile app demo and that will show you how to use the system. You will also receive a manual logbook prior to leaving the office in the event you are in a remote area with no cell service. If you are using paper logs the White copy of your log sheets must be sent in every pay period in your envelope and the yellow stay in your logbook.

Refer to your logbook memo if you have questions about logbooks.

Pre/Post Trip Inspection :

You need to complete your pre trip before driving the truck and complete the post trip when you finish your day. On 24-hour holes both the incoming and outgoing operators can go over the truck at the same time, this way both operators can save some time and then there are two sets of eyes looking for problems. White must be sent in with your envelope, yellow stays in the book. Be sure to leave this book in the truck, it does you no good if a DOT asks for it and it's in the well site trailer.

Time Sheets :

It is your responsibility to get your time sheet into the office by the 2nd and 16th of every month. Cut offs for pay period are the 15th and end of the month. This is how you get paid, make sure that you complete and submit your timesheet on time. You can fax this in from the rig, any consultant will be happy to send in a person's timesheet.

Field ticket # must be on your timesheet.

When working in the shop be sure to have maintenance supervisor sign off on your timesheet.

Worksite Inspections :

Work site inspections are used to determine how well you are performing your duties while in the field, post one in your shack so you can see what needs to be done and what you will be checked on.

Field supervisors, maintenance staff and operations supervisors will complete these whilst at your work site. In most cases the results of these will be shared with you as there are completed so you will have a chance to improve your results. Feel free to fill these out on your coworkers; these can be used to report good things as well as the bad.

Confined Space Entry Check

Confined space entry checks need to be completed every time you are going to enter the vacuum tank. Follow the procedure on the confined space entry check. Always wear the proper PPE and follow proper procedure when performing a confined space entry. Confined Space entry checks are only good for the date and time you are going to enter the tank. You cannot issue a blanket confined space entry to cover several confined space entries.

Only go in the tank, when necessary, if you have small shale build up that always happens in the same spot it is not necessary to clean it every time you open the tank. Plan your entry so you can inspect the tank, agitator equipment and remove the shale at the same time, this will reduce the number of entry's you need to do. When working on a job where you will have to enter the tank daily, then you will need to fill out a new confined space entry check every day. You do not need to complete new one every time you go in the tank, just fill it out so it covers 1 complete day. Send these in every pay period with the rest of your paperwork in the envelope.

6.18. Obligation to Refuse Unsafe Work

Function - To outline the obligations of employees in refusing unsafe work as well as the obligations of management in responding to the employee's concerns.

Employer Responsibilities - It is the employer's obligation to: make each worker aware of hazards at the work site through training, take all employees' concerns seriously investigate any and all hazards identified by employees.

Respond to an employee's concerns eliminate the hazard or, if it can not be eliminated, minimize the hazard to within tolerable limits by engineering controls, administrative controls, personal protective equipment, or a combination of any of these.

Employee Responsibility - It is an employee's obligation to: work safely following company safety procedures and facility operating procedures identify any hazards in his or her surrounding, either potential or actual, in either a piece of equipment, procedure or action. Identify any hazards in other employee surroundings stop work or the work of others upon identifying the hazard notify management of the hazard, first verbally and then in writing that the piece of equipment, procedure or action is unsafe.

Procedure - Hazard identification and reporting, each employee, in conducting his or her duties must be aware of the hazards that surround him or her. When an employee identifies a new hazard, the employee must stop the work and stop others from doing the work and verbally identify the hazard to the branch manager. If needed, the piece of equipment must be locked out and tagged as per Silverpoint lockout procedure. The operator needs to complete the hazard report form detailing the concern about the equipment or procedure and why it is unsafe.

6.19. Disciplinary Policy Guidelines – Overview

6.19.1. Purpose – Silverpoint's disciplinary process is intended to provide a fair, constructive, and consistent approach to correcting and dealing with employee's who display unacceptable conduct or work habits. Employee's will be informed and made aware of the obligations /consequences associated with their actions and will be given the opportunity to take corrective measures to improve performance. The authority to discipline an employee is entrusted to their immediate manager.

6.20. **Degrees of Discipline** – The following factors will be considered in determining the appropriate disciplinary action:

- 6.20.1. Seriousness of the offence
- 6.20.2. Effect, or potential effect, of the offense
- 6.20.3. Prior warnings and discipline received
- 6.20.4. Impulsive versus premeditated acts
- 6.20.5. Provocation
- 6.20.6. Misunderstanding
- 6.20.7. Employee's record
- 6.20.8. Level of job performance

6.21. Disciplinary Steps

6.21.1. **Verbal Warning** – under normal circumstances, discipline for a minor first offence is a verbal warning.

6.21.2. **Written Warning** – if the problem reoccurs or a non-related misconduct takes place, the manager will meet with the employee again to impress upon the employee the seriousness of the situation and confirm the employee's agreement to improve immediately.

- 6.21.3. **Suspension** – suspension without pay may be imposed for a first offence where the employee's misconduct or non-observance to policies and procedures is of serious nature.
- 6.21.4. **Termination** – if an employee does not demonstrate further improvement of conduct or work habits, the employee will be terminated for just cause. Culminating incidents for a first offense of grossly serious nature may also result in the dismissal of an employee for just cause. There is no pre-set number of warnings required before a decision to terminate can be made. This would depend on the nature of the specific problem or conduct under discussion. A more serious performance problem would require fewer warnings than a less severe one.
- 6.21.5. **Wiping the Slate Clean** – if an employee improves their performance, they are likely to maintain good performance provided they are given a clean slate. An offense would normally become inactive after one year.

Remember : if you are in doubt about what to do, call your Supervisor
