6. Procedure

- 6.1. Any Incidents , Spills , Accidents , Injuries , or anything else that might happen while on the job, **MUST** be reported to your Field Supervisor , Safety Supervisor or Field Technician (depending on the circumstance) **IMEDIATELY**, no matter how big or small it may be.

1-403-879-8977

- 6.1.1. When reporting an incident , spill, accident , injury, or anything else fill out the Silverpoint Reporting Form . When filling out the report , find out as much information and details as possible , this will help in filling out the report and help you answer any questions the safety supervisor may have .
- 6.1.2. If you have any questions in filling out this report , call your supervisor or the safety supervisor . We report **everything** so that we can become a safer company and have less injuries and to see where we need to improve or make changes so that everyone is safer working around the rigs .
- 6.2. We also have Hazard ID cards that we would like everyone to fill out. If you see anything that could potentially hurt yourself or someone else, we would like you to put it on this card (time, place, location , what it is, etc.). If you are able to eliminate this hazard , **please do** or see if someone could do it for you. If the hazard is something to do with the rig, write it down and hand it in to the push or the consultant and see if they could get it taken care of, same thing applies here, if you can eliminate the hazard **DO SO**. A simple thing to remember is, **find the hazards and eliminate them** .

A **Hazard** is a situation that poses a level of threat to life, health, property, or environment . A hazardous situation that has occurred is called an incident.

Hazard Identification is the process of identifying and reporting a situation that poses a level of threat to life, health, property, or environment; by quickly reporting hazards, their severity can be reduced by introducing controls or if possible, completely eliminating the hazard.

A **Near miss** is an unplanned event that did not result in injury, illness, or damage – but had the potential to do so. Only a fortunate break in the chain of events prevented an injury, fatality or damage.

Positive Observations: this is an opportunity to report the positive things that happen at work. Has a co-worker gone out of their way to help you out, did someone stop and ask if you're ok when you were stopped on the side of the road? Did a coworker stop and help you chain up, did the rig hands help you move your hoses or clean out a tank? Did you learn something today that everyone can benefit from?

Please take the time to report any positive observation you see while at work.

- 6.3. For all other types of reporting , to do with the truck or the job, refer to the **SOP 3.01** for a complete breakdown .
- 6.4. Refer to Dealing with Vehicle Break down **SOP 2.11** if something happens to your truck while driving or in the field .
Make sure that someone knows where you are at all times .
- 6.5. Write down problems you find with the truck in the PMI . Record number of loads and times of cement jobs . Fix what you can . Call if necessary to report problems or damage to a unit .
- 6.6. Any time a commercial vehicle is pulled over by DOT or police it is reported to Alberta Transportation and is recorded on our company carrier profile , this profile is a report card on how well we maintain our equipment and how safe our drivers are operating .
- 6.7. If you are stopped by a DOT or police officer in **any** company vehicle for any reason you are required to report it to your supervisor .
 - 6.7.1. You must report the reason for being stopped as well as the results of the stop (tickets , warnings , out of service) If you are given any paperwork from the officer as a result of being stopped you must send it to the office ASAP
 - 6.7.2. Reporting to a weigh scale is not considered a DOT stop, if you are required to report to the office for inspection before leaving the weigh scale that would be considered an inspection and would need to be reported .
 - 6.7.3. Any tickets you are convicted of while driving your personal vehicle (except photo radar) must also be reported to the office as these will affect your drivers abstract , Silverpoint pulls and reviews drivers abstracts every 6 months .
- 6.8. Call your Technician if there are any problems regarding spread field, drilling fluid, spills, missing fluid, ruts in field, getting stuck, shale piles in field, pooling of fluids . You can also refer to the Land Spreading Procedure 1.08 .
- 6.9. Record number of loads and the time that cement jobs occur .

Remember : if you are in doubt about what to do, call your Supervisor
